OUR VALUES

*Since our creation in **1958**, Leblanc illuminations' top priority has been to strengthen the positive impact of our activities on the environment by eliminating, reducing or compensating any potentially negative consequences.*

A pioneering spirit.

In 1996, we were the first company in Europe to use LED technology in our decorations. Ever since, we have continued to develop leading-edge technologies. Having put in place an ambitious CSR charter, we are constantly innovating to tackle our other great challenge: the environment. Eco-design, recycling, reduction of CO₂ emissions...

It is no surprise that we were the first player in the market to have obtained a CSR label.

Leblanc illuminations is the most CSR labelled player in the market.

Leblanc illuminations, the first French company in its sector to be labelled by an independent organization for its overall CSR approach.

Our CSR and ISO commitments

They are built on three pillars:

- Saving resources and energy
- Reducing the impact of our products on the environment
- Taking care of our teams, our clients and future generations

CARBON FOOTPRINT

Saving resources and energy

We attach great importance to reducing carbon emissions and limiting the harmful effects of climate change. Determined to lead our industry towards a more sustainable and responsible tomorrow, we continue to work on product design innovations with a view to generating further savings of resources and energy.

Waste management

- Our packaging film consists **90% recycled plastic**.
- **89% of the waste generated by our European sites is recycled.**
- Plastic links previously used on our garlands have been replaced with paper links.
- **2.3 million plastic covers have been removed from our 24 V garlands, without affecting their quality.**

Energy

We choose local services and purchases where possible, like our aluminium produced in France, to avoid the emissions associated with transport. An environmental energy assessment is presented with 100% of our projects.

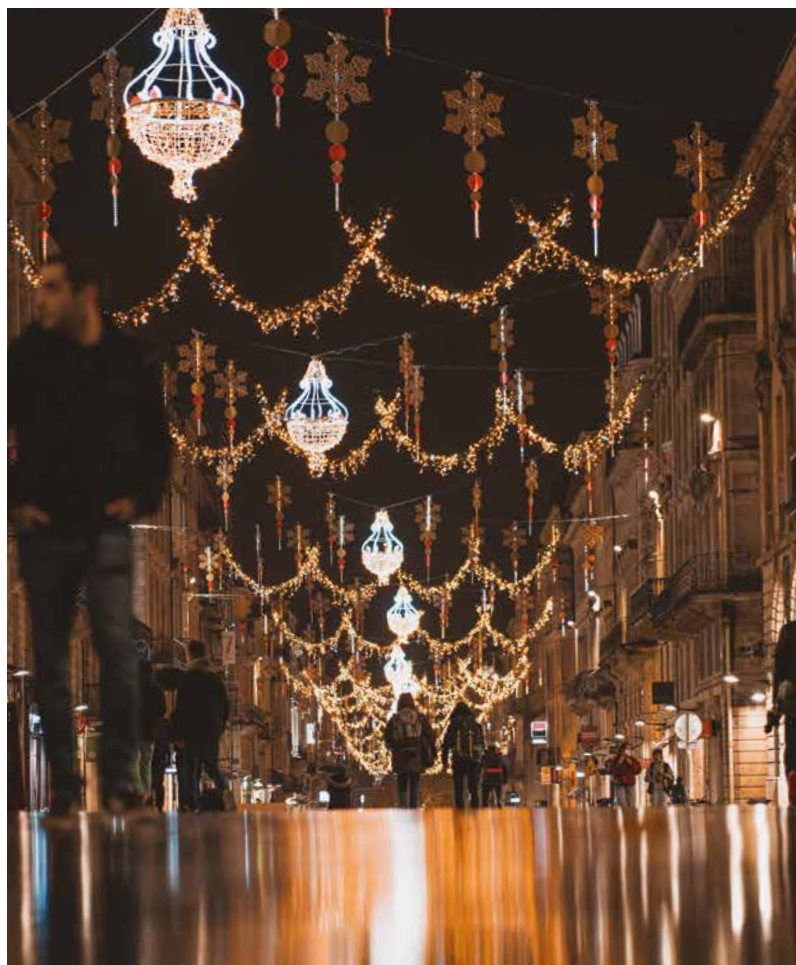

100%
green electricity
for all our European premises
since 2020.

7 tons
of paper,
i.e. the equivalent of more than 100 trees,
saved thanks to our digital catalogue.

A LUMINOUS ECO-DESIGN

Reduce the impact of our products on the environment

100% of Leblanc decorations are manufactured by our experts in-house. Therefore, we have control over the sustainability and environmental impact of our products.

We centre our recycling on three pillars:

- **Reduction** in carbon emissions, including those associated with transport, and plastic use throughout our product life-cycles.
- **Re-use** of the raw materials at the end of our product life-cycles.
- **Recycling** of all the waste from our offices and production workshops.

95%

less greenhouse gases

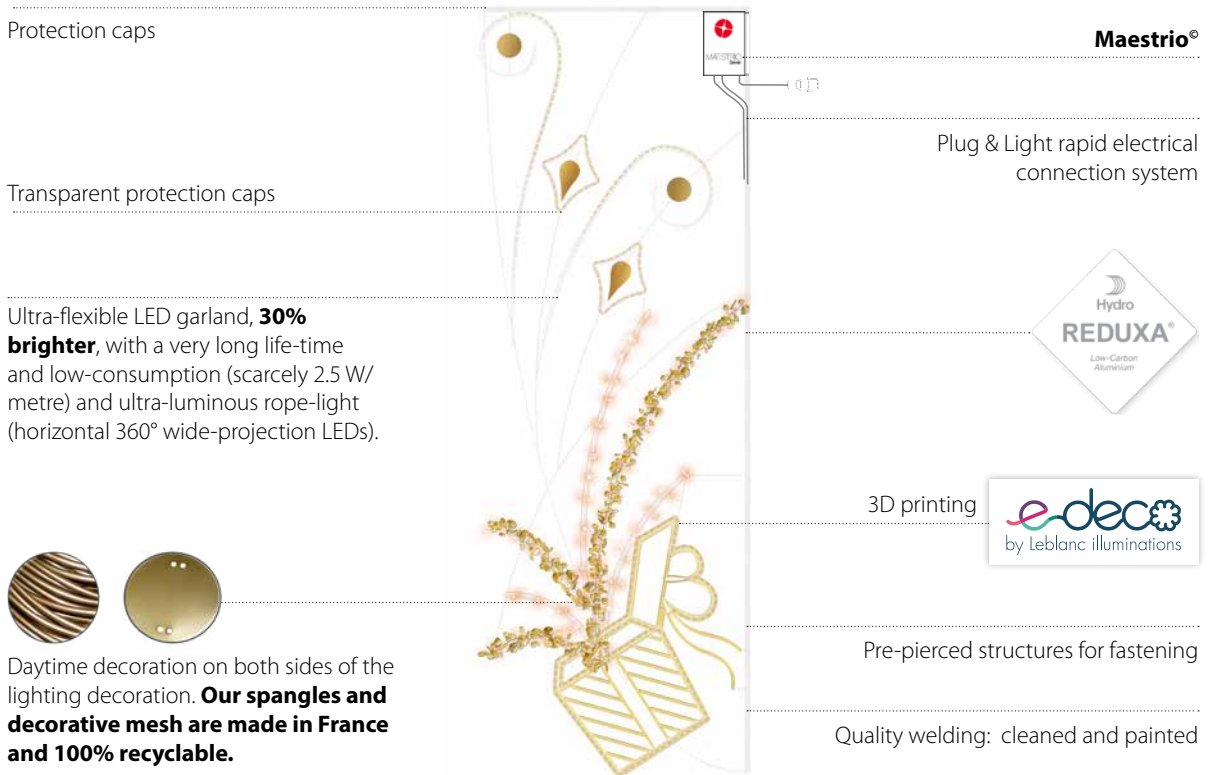

in 25 years thanks to a considerable reduction in the electricity consumption (down by 93%) of our decorations with the introduction of LED technology in 1996.

Carbon neutral by 2025

We have pledged to remove 100% of single-use virgin plastics from our offices by the end of 2022 and reduced all other plastics used in our manufacturing and distribution processes.

Quality and tranquillity

Our teams are constantly seeking eco-responsible solutions that will allow a reduction in plastic use and carbon footprint of our products, while improving their performance and sustainability.

e-deco by Leblanc

Innovative materials, optimised energy consumption, new production methods: we are transforming our business to offer you products suited to the demands of sustainable urban life.

Maestrio, 50% electricity saving

thanks to patented **Maestrio®** technology, developed by our teams, simply by controlling the illuminations' light-up time.

Aluminium Hydro REDUXA

This is an aluminium with a low environmental impact. **It includes 60% recycled metal and is produced using renewable energy.**

100% of the aluminium frames returned to us at the end of their life-cycle are converted into new decorations or products.

3D PRINTING, A GREEN REVOLUTION

The promise of decorations tailor-made to strict and committed specifications: materials that are resistant without being brittle, respect the environment and have efficient recycling programmes to give them new life.

An eco-responsible process

This project is the fruit of a collaboration with **Drawn**, a French start-up.

Detailed designs deliver daytime effect with eco-credentials

Leblanc illuminations turns its daytime decorations into sustainable products. Our new 3D printing process liberates creativity and reduces production times. The results are exquisitely detailed decorations with excellent daytime effect. The decorations are robust but lightweight, so suitable for indoor and outdoor use. Our 3D printed products are fully recyclable. The material will be transformed into new granules for new decorations.

For further information

Request our
e-deco by Leblanc brochure

A 100% biosourced, recyclable and sustainable material

It is manufactured with short supply chains in France. It comes from natural raw materials that do not compete with food production.

A 100% recycled, recyclable and sustainable material

Naturally white and shiny, it is manufactured in France from waste.

An acclaimed material

Our R&D teams focus their work on a new 100% recyclable material, with an in-house recycling process. Exclusively produced by Leblanc illuminations, this translucent multicoloured material bounces projects light particularly well.

LEBLANC FOR ALL SEASONS

Coloured decorations

Leblanc illuminations can deliver stylish decorations for your events, whatever the season.

We share more than
light, we share
emotions.

THE BEST OF OUR CHRISTMAS WISHES

**Our designers have been inspired
by their most beautiful Christmas
memories, to create these collections.**

Whether traditional or modern, each design has the magic of Christmas at its heart to deliver a moment of joy and happiness.
